### **DETAILED ACTION**

Applicants' arguments, filed 2/5/2008, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are either reiterated or newly applied. They constitute the complete set presently being applied to the instant application.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

### ***Claim Rejections - 35 USC § 103***

The rejection of claims 1-15 under 35 USC 103(a) as being unpatentable over Wood et al. in view of Klasa et al. and in further view of De Bont et al. is maintained with regard to claims 1-7.

Applicant argues that Wood et al. is not alleged to suggest that PTK787 would be useful for treating AML and that Klasa et al. does not contain data which provides one of skill with a reasonable expectation that the antiangiogenic drugs would actually be useful for treating AML or that Ptk787 would be more likely to succeed than the numerous other drugs discussed. Applicant argues that Klasa is an invitation to experiment with antiangiogenic drugs for treating hematologic malignancies, such as AML. Applicant also argues that De Bont et al. does not provide any data which would lead one of skill to reasonably expect that PTK787 would successfully treat AML.

Art Unit: 1612

Applicant, in summary, states that the presently claimed invention is patentable over the combined disclosure of the references, since neither the primary or secondary references provide disclosure that would lead one of skill in the art to reasonably expect that PTK787 would successfully treat AML. The Examiner disagrees.

Here, applicant points out the deficiencies in each reference in regard to the claimed invention. However, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). The primary reference, Wood et al., discloses that PTK787 is useful in the treatment of leukemia, but is silent on acute myeloid leukemia or AML. Klasa establishes that AML can be treated via the same mechanism of action of PTK787. De Bont was used to establish that juvenile AML is not different from other AML. Therefore, the artisan would reasonably expect success in treating AML, including juveniles, with the PTK787 of Wood et al.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1612

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
